1 Introduction	1
1.1 What are Green's Functions?	2
1.2 The importance of Green's functions for FE-analysis	3
1.3 A 1-D Problem	4
1.3.1 The Analytical Solution	4
1.3.2 Green's Function	4
1.3.3 Finite Elements	5
1.3.4 Finite Elements and Green's Function	6
1.4 Entanglement	9
1.4.1 Functionals	12
1.4.2 Proof	16
1.5 Goal Oriented Refinement	19
1.6 Model Adaptivity	19
1.6.1 Local & Global	25
1.7 How To Calculate Influence Functions with Finite Elements ..	27
References	34
2 Basic Concepts	35
2.1 Elements of Functional Analysis	36
2.1.1 Notation	37
2.1.2 Vector Spaces and Scalar Product	38
2.1.3 Linear Functionals	39
2.1.4 Projection	41
2.1.5 Variational Problems	42
2.1.6 Equivalent Norms	43
2.1.7 Galerkin Method	45
2.1.8 Sobolev Spaces	46
2.2 Green's Identities	48
2.2.1 Gauss' Theorem	48

2.2.2	The Laplace Operator	49
2.2.3	Linear Self-Adjoint Operators	52
2.3	Duality	53
2.3.1	Linear Algebra	54
2.3.2	Vectors and Linear Functionals	56
2.4	Influence Functions	57
2.4.1	Influence Function for $u(x)$	58
2.4.2	Influence Function for $u'(x)$	60
2.4.3	Weak Influence Function for $u(x)$	61
2.4.4	A Sequence that Converges to G_1	66
2.4.5	Elevators and Escalators	67
2.4.6	Influence Functions in Higher Dimensions	69
2.4.7	Weak Influence Functions	71
2.4.8	Non-Zero Boundary Values	71
2.4.9	Average Values of Stresses	73
2.5	Properties of Green's Functions	76
2.5.1	Modern Approach	79
2.5.2	Maxwell	80
2.5.3	Modes of Decay	81
2.5.4	Dipoles and Monopoles	82
2.5.5	Multipole Expansion	86
2.5.6	Infinite Energy	88
2.5.7	Genealogy of Influence Functions	90
2.6	Sobolev's Embedding Theorem	91
2.7	Fundamental Solutions	93
2.7.1	Influence Function	94
2.8	Ill-posed Problems	94
2.9	Nonlinear Problems	96
2.9.1	Lagrange Multiplier	97
2.9.2	Lagrange Multiplier and Linear Algebra	97
2.9.3	Nonlinear Functionals	99
2.9.4	Nonlinear Problems	101
2.10	Mixed Problems	103
	References	104
3	Finite Elements and Green's Functions	105
3.1	Poisson Equation	106
3.2	The FE-Load Case p_h	108
3.2.1	Distributions	110
3.2.2	Notation	110
3.3	Extensions	114
3.3.1	Betti's Theorem—Extended	114
3.3.2	Tottenham's Equation	115
3.3.3	Maxwell's Theorem—Extended	118
3.4	Proxies	120

3.4.1	$G_h = G$ on \mathcal{V}_h^*	121
3.4.2	$\delta_h = \delta$ on \mathcal{V}_h	122
3.4.3	$J_h(u) = J(u)$ on \mathcal{V}_h	124
3.4.4	Summary	129
3.5	Dirac Energy	130
3.6	Generalized Green's Functions	134
3.6.1	Arbitrary Deltas	136
3.7	Influence Functions for Integral Values	139
3.7.1	Nodal Forces	140
3.8	Weak Influence Functions	143
3.9	Weak Influence Functions Have More Choices	145
3.10	Nodal Form of Influence Functions	147
3.10.1	Numerical Effort	149
3.10.2	Sensitivity Plots	151
3.10.3	What is $\mathbf{j}^T \mathbf{u}$?	152
3.11	Nodal Values of Green's Functions	153
3.11.1	Finite Differences and Finite Elements	154
3.11.2	Influence Function for $p(x)$	154
3.11.3	The Foot Print of p_h	157
3.12	The Inverse Stiffness Matrix	158
3.12.1	Examples	160
3.13	Condition of a Stiffness Matrix	162
3.13.1	The Triple Product	165
3.14	Interpolation	165
3.14.1	The Nodal Vector \mathbf{u}_I	168
3.15	Infinite Stresses	172
3.15.1	Archimedes' Lever	173
3.15.2	Continuous Beam	176
3.15.3	Cantilever Plate	177
3.15.4	Summary	179
3.16	Why Do Singularities Matter?	180
3.17	Nature Makes No Jumps—Finite Elements Do	180
3.18	Influence Functions for Support Reactions	182
3.18.1	Global Equilibrium	184
3.18.2	A Paradox?	186
3.19	The Path the Load Takes	186
3.20	The Path the Influence Function takes	191
3.21	Mixed Problems	193
3.21.1	Tottenham's Equation for Mixed Problems	196
3.22	Condensation of a Stiffness Matrix	197
3.23	p -Method	199
