1	Basics	3
1.1	Introduction	3
1.1.1	Principle of virtual displacements	4
1.1.2	Betti's theorem	5
1.1.3	Influence functions	6
1.1.4	Identities	8
1.2	Green's Identities	9
1.2.1	Longitudinal displacement $u(x)$ of a bar	9
1.2.2	Shear deformation $w_s(x)$ of a beam	10
1.2.3	Deflection w of a rope	11
1.2.4	Deflection w of a beam	11
1.2.5	Deflection w of a beam, second-order theory	11
1.2.6	Beam on elastic support	12
1.2.7	Tensile chord bridge	12
1.3	Variational Principles of Structural Analysis	12
1.4	Zero Sums	14
1.5	Examples	16
1.5.1	The principle of virtual displacements	16
1.5.2	Conservation of energy	18
1.5.3	The principle of virtual forces	19
1.6	Frames	20
1.7	Single Forces and Moments	23
1.8	Support Settlements	24
1.9	Springs	27
1.10	Temperature	28
1.11	Mohr's Equation	29
1.12	Duality	30
1.13	Principle of Virtual Forces versus Betti	31
1.14	Weak and Strong Influence Functions	33
1.15	The Canonical Boundary Values	38
1.16	The Dimension of the f_i	40

1.17	Reduction of the Dimension of a Problem	41
1.18	Boundary Element Method	42
1.19	Finite Elements and Boundary Elements	43
1.20	Must Virtual Displacements be Small?	47
1.21	Only When in Equilibrium?	48
1.22	What is a Displacement and What is a Force?	49
1.23	The Number of Force and Displacement Terms	50
1.24	Why the Minus in $-EA u'' = p$?	51
1.25	The Virtual Interior Energy	52
1.26	Equilibrium	52
1.27	How a Mathematician Discovers the Equilibrium Conditions	55
1.28	The Mathematics Behind the Equilibrium Conditions	55
1.29	Sinks and Sources	56
1.30	The Principle of Minimum Potential Energy	57
1.30.1	Minimum or maximum?	58
1.30.2	Cracks	61
1.30.3	The size of the trial space \mathcal{V}	63
1.31	Infinite Energy	65
1.32	Sobolev's Embedding Theorem	68
1.33	Reduction Principle	71
1.34	Nonlinear Problems or Symmetry Lost	74
2	Betti's Theorem	77
2.1	Basics	77
2.2	Influence Functions for Displacement Terms	80
2.2.1	Derivation of an Influence Function	81
2.3	Influence Functions for Force Terms	85
2.3.1	Influence Function for $N(x)$	87
2.3.2	Influence Function for $M(x)$	88
2.3.3	Influence Functions for Higher-Order Derivatives	90
2.3.4	Moments Differentiate Influence Functions	92
2.4	Statically Determinate Structures	92
2.4.1	Pole-plans	96
2.4.2	Construction of Pole-plans and the Shape of the Displaced Figure	96
2.4.3	How to Determine the Magnitude of Rotations	97
2.4.4	Influence Function for a Shear Force, Fig. 2.20	99
2.4.5	Influence Function for a Normal Force, Fig. 2.21	100
2.4.6	Influence Function for a Moment, Fig. 2.22	101
2.4.7	Influence Function for a Moment, Fig. 2.23	102
2.4.8	Influence Function for a Shear Force, Fig. 2.24	105
2.4.9	Influence Function for two Support Reactions, Fig. 2.25	105
2.4.10	Abutment Reaction, Fig. 2.26	107
2.5	Statically Indeterminate Structures	108
2.6	Influence Functions for Support Reactions	110

2.7	The Zeros of the Shear Force	113
2.8	Dirac Deltas	113
2.9	Dirac Energy	117
2.10	Point Values in 2-D and 3-D	122
2.11	Duality	124
2.12	Monopoles and Dipoles	126
2.13	Influence Functions for Integral Values	133
2.14	Influence Functions Integrate	133
2.15	Second-Order Beam Theory	136
3	Finite Elements	139
3.1	The Idea of the FE-Method	139
3.2	Why the Nodal Values are Exact	142
3.3	Adding the Local Solution	145
3.4	Projection	149
3.5	Equivalent Nodal Forces	150
3.6	Fixed End Forces	152
3.7	Shape Forces and the FE-Load Case	153
3.8	Slabs and the FE-Load Case	160
3.9	Computing Influence Functions with Finite Elements	161
3.10	Functionals	162
3.11	Weak and Strong Influence Functions	165
3.12	Examples	167
3.13	The Local Solution	174
3.14	The Central Equation	175
3.15	State Vectors and Measurements	178
3.16	Maxwell's Theorem	180
3.17	The Inverse Stiffness Matrix	183
3.18	Examples	184
3.19	General Form of an FE-Influence Function	186
3.20	Finite Differences and Green's Functions	188
